

↳ Aggregation
↳ Aggregate
↳ Index

Bulk data from an API
Have to handle display

- ① pagination
- ② infinite scroll

pagination
front-end ⇒ Backend (API)

1 2 3 4 5

In SQL
↳ limit
↳ offset

in MongoDB
↳ limit
↳ skip

Index

- ↳ find
- ↳ update
- ↳ delete

(-id)
PK

Database
↳ collection
↳ document
↳ 1
↳ 2
↳ 3
↳ 4
↳ 5
↳ 6
↳ 7
↳ 8

id
search

by default, index is created.

(-id)

index (sorted)
↳ binary search

In MongoDB
create index

key: "name"

document

- ① id, name
- ② id, name
- ③ id, name

collection can

(index) (sorted)

key

- A-
- B-
- C-
- D-
